

AI Software Engineer building production multi-agent LLM systems, data platforms, and internal products used by 180+ weekly users.

Work Experience

AI Software Engineer Dev Team	Interscope Records (Universal Music Group) Santa Monica, CA	Sep 2025—Present
- Architected and built a multi-agent LLM system on Vertex AI and LangGraph serving 180+ weekly internal users; interviewed 20+ stakeholders to encode domain knowledge and design specialized agents for business and data queries - Built a React/TypeScript analytics platform with FastAPI backend that replaced 30+ Tableau dashboards and embedded AI agents directly on report pages, enabling natural language queries against live data - Built a TypeScript and Python A&R research application ingesting TikTok, streaming, and social data to surface thousands of emerging artists per week, with team workspace and artist outreach tools used for signing decisions		
Data Engineer	Interscope Records (Universal Music Group)	Sep 2024—Aug 2025
- Built and maintained Python and BigQuery pipelines powering daily and weekly executive reporting across streaming and sales data - Designed a reporting layer serving 15+ standardized views to international stakeholders, reducing ad-hoc requests by consolidating metrics into queryable data models		
Backend Developer	HyperCard AI Cary, NC	Nov 2023—Aug 2024
- Built an LLM-powered natural language to Salesforce query service, letting non-technical users run database queries in plain English and reducing support tickets by 30% - Designed an error monitoring system processing 10K+ daily events, enabling rapid debugging across the platform		

Projects

[Lapwise.dev](#) ([GitHub](#)): Full-stack F1 analytics platform

- Built an AI analyst for natural-language analysis across 76 seasons of F1 race data, generating live charts, tables, and analysis through a router agent with specialized sub-agents
- Developed full-stack app in Next.js, React, FastAPI, and PostgreSQL
- Launched a daily grid guessing game with leaderboard synced to live race data

Technologies and Languages

- Python, TypeScript, SQL, LangGraph, MCP, RAG, Vertex AI, GCP, BigQuery, React, Next.js, FastAPI, PostgreSQL

Education

- **B.A. Computer Science, B.S. Statistics & Analytics, Minor Hispanic Studies** **2019–2023**
University of North Carolina at Chapel Hill
